

**FOR IMMEDIATE RELEASE**

**Hawkeye Vision Launches Cloud Services: Surveillance Video Hosting and Remote Storage**

Hawkeye Vision, Inc. (HVI) has been a leader in high quality surveillance equipment, integrations and service for over 10 years. Effective immediately HVI will be offering Surveillance Video Hosting and Remote Storage.

Technology is changing faster every day for video surveillance in the area of video analytics and analysis, and keeping up with those changes is not cost effective for the average customer. With HVI remote video hosting, the customer no longer needs a large capital outlay for equipment and software to get the latest in technology. "The HVI Remote Video Hosting service will stay up to date with the latest surveillance features while holding down the total cost of ownership," Says Robert Gustafson CEO.

"Managing large amounts of video requires a greater level of expertise. HVI's information technology background makes this a logical addition to our current products and services for the Physical Security Market," says Jon Driscoll COO. All cloud services will be managed in house at the HVI office in Omaha, NE. Bandwidth and storage can be increased quickly on HVI servers as the demands grow.

Advantages of Remote Video Hosting and Remote Storage include but are not limited to: Disaster Recovery, Data Security, Ensured Uptime, High Quality of Service, and Cost Effective Measures.
